Media Room Migration - Requirements

Status	DRAFT Requirements Baseline
Scope	Migration of StoryBoard and Media room
Taregt Platform	AEM with Edge Delivery Services
Primary Experiences	Stories and Media Room
Due date	25.09.2026
Owner	Prasadaietepamula, Jagan (Sapient GmbH)
Stekeholders	

1. Document Purpose

This document captures the current known requirements for the migration and reimplementation of Skoda Storyboard on Adobe Experience Manager (AEM) with Edge Delivery Services. Its purpose is to consolidate the main functional and editorial behaviors of the existing solution and translate them into a first structured requirements baseline for the target implementation. The target solution is not expected to radically redesign the current business logic, although some navigation, taxonomy, and content model simplifications are currently under discussion with the client.

This document defines the functional, editorial, technical and non-functional requirements for the migration and reimplementation of **Skoda Storyboard – Stories and Media Room** on **Adobe Experience Manager (AEM) with Edge Delivery Services (EDS)**.

The objective is to:

- Preserve the essential business and user-facing functionality of the current solution.
- Provide a clear target-state functional baseline for the migration.
- Identify the requirements for Media Room and Stories experiences.
- Define experience, authoring, DAM, workflow and localisation requirements.

The migration is not intended to be a one-to-one technical replication of the legacy implementation. Where multiple legacy components provide similar functionality, they should be consolidated into reusable EDS blocks where appropriate.

2. Context and Scope

The current Skoda Storyboard solution consists of two primary experience: https://www.skoda-storyboard.com/en/

1. **Stories:** https://www.skoda-storyboard.com/en/
2. **Media Room:** https://www.skoda-storyboard.com/en/media-room/

Both experiences share the overall platform but have different editorial purposes, navigation structures and content types.

The **Stories** experience is primarily editorial and focuses on articles and storytelling.

The **Media Room** is primarily designed for journalists and media users and focuses on:

- News / press releases
- Press kits
- Images
- Videos
- Models
- Downloadable media
- Media contacts and corporate information

The target solution should retain the essential functionality of both experiences while simplifying navigation, taxonomy and component implementation where agreed.

The objective is to reproduce the required Storyboard and Media Room capabilities in EDS while maintaining the current business/user experience and editorial outcomes as below item in scope, unless an explicit change is agreed.

In Scope:

- Stories experience.
- Media Room experience.
- Common/global website functionality.
- Existing primary page types and user journeys.
- Navigation and section switching.
- Search, listing and filtering.
- Language/country selection.
- Stories, categories, Series and model-related content.
- News / Press Releases.
- Press Kits.
- Images and Videos.
- Media preview and downloads.
- Media basket/cart.
- Newsletter/subscription user experience.
- Cookie/consent user experience.
- Editorial page setup, authoring, preview and publishing.
- Roles and permissions.
- Pre-publication/restricted content.
- DAM and asset-management capabilities.
- Historical content and asset migration.
- Supporting integration points required by the above functionality.

Existing functionality that depends on a third-party service will remain documented as a functional requirement.

The implementation, replacement or migration of an unidentified third-party platform is **not assumed to be in scope** until the provider, ownership and target approach have been confirmed.

Examples currently requiring confirmation include newsletter/subscription, consent management and external audio services.

3. Migration Principles

- **Functional continuity (Lift n Shift):** Preserve required business/user behaviour and editorial outcomes. Any removal or functional change should be explicitly agreed.
- **EDS-aligned implementation:** Implement the required experience using appropriate AEM/EDS capabilities rather than prescribing how the current technical solution must be reproduced.

- **Content-appropriate authoring:** Stories require flexible editorial composition, while more structured content such as Press Releases and Press Kits may require controlled page structures. Universal Editor, document-based authoring or a hybrid model remains a technical decision.
- **Controlled simplification:** Existing pages, capabilities and content remain the starting baseline- consolidation, removal or redesign should be handled as an agreed change or enhancement. (Skodapedia)

4. Discovery & Requirements Approach

4.1 Discovery Inputs

The requirements have been developed using:

- walkthroughs of the existing Storyboard and Media Room solution with the team
- review of the current live website and key user journeys
- page-level component and asset assessments (used XB accelerator)
- discussions with Business and the current Agency regarding editorial features and CMS behaviour;
- review of existing requirements and known operational/editorial processes.

The component assessments are used primarily to establish what currently appears on each page and how it behaves. They are not treated as the proposed EDS component architecture.

4.2 Requirements Classification

The requirements are organised into three principal areas.

Functional – Frontend

Defines what the website user sees and can do.

Functional requirements are grouped into:

1. Common capabilities across Stories and Media Room.
2. Storyboard-specific capabilities.
3. Media Room-specific capabilities.

Editorial / Authoring / DAM

Defines how editors and authorised users:

- establish pages
- create and update content
- configure components;
- select and manage assets
- preview and publish
- manage access;
- manage market/language content.

Non-Functional

Defines cross-cutting requirements including:

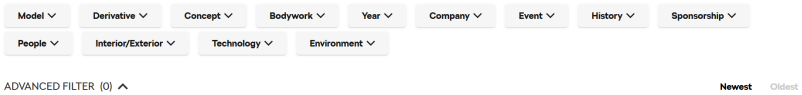

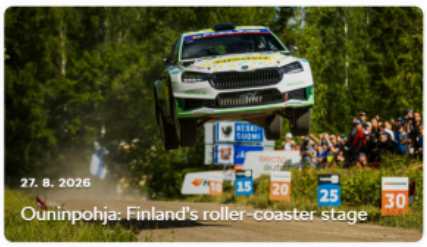

preview and publish:

  - URLs and SEO
  - Analytics and tracking
  - consent/privacy
  - performance
  - accessibility

5. Functional Requirements

5.1 Common – Stories & Media Room

ID	Component / Capability		Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point	
COM-01	Site Header	blocked URL	Provide consistent access to primary site functions across applicable pages.	Branding, navigation, section controls.	Presentation may vary by Stories / Media Room.	
COM-02	Section Switcher	blocked URL	User can move between **Stories** and **Media Room** and identify the active section.	Stories / Media Room labels and destinations.	Common site-level capability.	
COM-03	Primary Navigation	blocked URL	User can access applicable top-level and nested sections. ▪ Models (dropdown), eMobility, Lifestyle (dropdown), Škoda World (dropdown), Series, Škodapedia, Podcast. This is a materially different nav set from Media Room's (News /Press Kits/Models/Images /Videos/Company/Škodapedia)	Navigation labels, destinations, child items.	Stories and Media Room may use different navigation configurations.	
COM-04	Model / Secondary Navigation		Navigation can expose nested model or section destinations where required.	Configured model /section list.	Exact structure to be confirmed.	
COM-05	Language / Country Selector	**EN** CZ DE SK SR SL	User can switch to another available language/market version. Eg: Models: All models listed - Fabia, Octavie, Scala etc	Available language variants for applicable content.	Individual content shall expose only available authored variants. Overall market model TBD.	
COM-06	Global Search	blocked URL	User can enter free text and search relevant site content.	Search term, content type.	Ranking, searchable types and implementation TBD.	
COM-07	Listing / Filtering		User can narrow content collections using applicable criteria.	Content type and page-specific facets.	Filter set varies by content type.	

						
COM-08	Content Card		User can identify and open a content item from a listing, grid or slider.	Image, title and supporting metadata according to card variant.	Story, News, Series, Model and Media cards require variants.	
COM-09	Hero / Page Banner	blocked URL	Provides page/section identity and primary visual treatment.	Image, title and optional metadata /text.	Multiple presentation variants exist. Full widthbanner is only applicable for stories section??	
COM-10	Carousel / Slider	blocked URL	User can browse a horizontal collection of configured or dynamically sourced items.	Heading, items, navigation, optional View All.	Used extensively across Storyboard.	
COM-11	Pagination / Load More		User can access additional results beyond the initial listing.	Current /total result state where applicable.	Interaction pattern should be confirmed per page family. (currently 6)	
COM-12	Media Preview - Actions	blocked URL	User can preview applicable media without leaving the current context.	Asset, navigation between assets.	Accessibility requirements apply.	
COM-13	Media Download		User can download an available media asset/rendition. ▪ single/Multi files	Original and /or configured rendition.	DAM /download approach TBD.	
	Media Cart			Asset and	Mainly journalist	

COM-14			User can add eligible assets to a cart /basket and retain selections while browsing.	rendition selection.	/media use case.	
COM-15	Social Share	blocked URL	User can share applicable page /content through supported channels. • Main Page • Footer section	Page URL and configured social channels.	Channel list should be configurable.	
COM-16	Subscription	blocked URL	User can access applicable newsletter/subscription functionality.	Email, consent, submit and feedback.	Provider /integration TBD.	
COM-17	Cookie / Consent		User can accept, reject and manage applicable consent preferences.	Consent categories /preferences.	CMP /provider TBD.	
COM-18	Footer	blocked URL	User can access supporting navigation, social and other applicable utilities. The footer must remain aligned with the standard Škoda footer pattern, including links such as app stores and social channels. app-store badges, four social icons (Facebook, Instagram, — one more than the homepage's own social block), and a full sitemap: Models (all 11 lines), eMobility, Lifestyle (People/Sports /Adventures), Škoda World (Innovation & Technology/Design /Responsibility/Corporate Life /Heritage), Series, Škodapedia, Podcast.	Navigation, social links, supporting links.	Stories / Media Room variants possible.	
COM-19	App download Badge	blocked URL	• User can download the apps from respective platforms. • Applicable for Mobile users. • Desktop users wil be able to open the link		Available	

5.2 Storyboard Functional Requirements

The Storyboard experience is primarily editorial and should support flexible content presentation across homepage, category/section pages, Series, model-related pages and Story articles.

A. Storyboard Homepage

ID	Component /	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point

	Capability			
STO-H01	Promotional / Featured Carousel	Surface prominent Stories and allow navigation between promoted items.	Image, headline, supporting metadata/content as configured.	Manual curation vs automated selection TBD.
STO-H02	Latest Stories	Display recent Stories and allow navigation to Story detail.	Story cards.	Number of initially displayed items TBD.
STO-H03	Models Slider	Provide direct discovery/navigation to model-related content.	Model image + model name /link.	Model source/order TBD.
STO-H04	eMobility Stories Slider	Surface relevant eMobility Stories.	Story cards within slider.	Dynamic vs curated source TBD.
STO-H05	Lifestyle Stories Slider	Surface relevant Lifestyle Stories.	Story cards within slider.	Category structure under review.
STO-H06	Škoda World Stories Slider	Surface relevant Škoda World Stories.	Story cards within slider.	Category structure under review.
STO-H07	Series Slider	Surface Story Series and navigate to Series pages.	Series image, title and relevant supporting text.	Review the functionality of Cards and Text. Currently only the imageas are clickable and not the text below the image. The style and composition is different from other pages of Stories. No date available Sorting logoc for list of items in series??
STO-H08	Latest News	Surface relevant News / Press Release content on Storyboard where required.	News/press-release card variant.	Confirm continued business requirement and source.
STO-H09	Social Media	Provide access to approved Škoda social channels/content.	Social destinations/content.	Exact future treatment TBD.

B. Story Category / Subcategory Pages

Applies to sub-sections or pages - examples such as:

- eMobility
- Lifestyle / People;
- Škoda World / Innovation & Technology;
- other Story categories/subcategories following the same pattern.

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
STO-C01	Category Hero	Identify the current Story category/subcategory.	Hero image + category/section title.	Visual variants may exist.
STO-C02	Story Results Grid	Display Stories associated with the current category /subcategory.	Collection of Story cards.	Retrieval basis/category mapping TBD.

STO-C03	Story Card	User can identify and navigate to an individual Story.	Image, headline and applicable date /category metadata.	Card metadata/layout may vary by page.
STO-C04	Pagination Status	Indicate current result coverage where applicable.	Current results / total results.	-
STO-C05	Load More	Load further Story results without requiring a new page selection where required.	Additional Story cards.	Pagination UX to be confirmed.

The same overall pattern is visible across the assessed eMobility, Lifestyle and Škoda World category pages.

C. Series Page

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
STO-S01	Series Hero	Identify the Series area.	Hero image + Series title.	—
STO-S02	Series Grid	Display the available Story Series.	Collection of Series cards.	Ordering/source TBD.
STO-S03	Series Card	Navigate the user into a Series.	Image + Series title + excerpt/description where provided.	—

D. Storyboard Model Page

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
STO-M01	Model Hero	Identify the selected vehicle model.	Model/hero image + model title.	—
STO-M02	Featured Model	Provide additional prominent model-specific presentation/navigation.	Model image + configured supporting content.	Exact editorial purpose/configuration to confirm.
STO-M03	Model-related Stories Grid	Display Stories associated with the selected model.	Story cards.	Association currently appears metadata-driven; final logic TBD.
STO-M04	Story Card	Navigate to related Story content.	Image + title + applicable metadata.	—
STO-M05	Pagination / Load More	Access additional model-related Stories.	Additional cards.	—

E. Story Detail Page

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
STO-D01	Story Hero	Present Story identity and key metadata.	Title, hero image, perex/lead, publication date, category.	Confirm required hero variants.
STO-D02	Rich Text	Authors can present structured article text.	Paragraphs, headings, links and inline content.	Flexible composition required.
STO-D03	Embedded Video	User can view video embedded within the Story.	Video/embed plus consent handling where applicable.	Provider and consent relationship TBD.
STO-D04	Image Carousel / Gallery	User can browse multiple Story images. ▪ Auto play	Multiple images + navigation on both sides.	Auto-play requirements TBD.
STO-D05	Newsletter Widget	Provide subscription entry while consuming Story content.	Email + consent + submit.	Third-party provider TBD.
STO-D06	Related Stories	Surface contextually related Stories.	Story teaser cards.	Matching logic/configuration TBD.
STO-D07	Article Sidebar	Support applicable supporting content adjacent to article.	Related/promo/subscription blocks depending page.	Responsive treatment required.
STO-D08	Side Banner	Support an editorial/promotion banner where configured.	Image + optional destination.	Confirm whether retained as generic capability.
STO-D09	Media Box / Gallery	Provide downloadable supporting media related to the Story. ▪ Download ▪ Add to cart (Single + Group) ▪ Default view of 8 card	Media items + renditions/download/cart where applicable.	DAM relationship TBD.
STO-D10	Social Share	Allow the Story to be shared through supported channels.	Share destinations.	—

5.3 Mediaroom Functional Requirements - WIP

The Media Room serves journalist/media use cases and focuses on News / Press Releases, Press Kits, Images, Videos, Models and downloadable media.

A. Media Room Homepage

ID	Component / Capability		Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
MR-H01	Featured / Promotional Content		Surface prominent Media Room content.	Image, date, title and relevant metadata.	Number and curation logic TBD.
MR-H02	News		Surface recent News / Press Releases.	News card / slider.	—
MR-H03	Images	blocked URL	Surface recent/relevant image assets.	Image card with preview/download capabilities where applicable.	DAM source TBD.
MR-H04	Videos		Surface video content.	Video card / preview.	Video delivery model TBD.
MR-H05	Models		Provide access to vehicle model content.	Model image + name/link.	Final model list/order TBD.
MR-H06	Press Kits		Surface Press Kits.	Press Kit card.	Card fields to confirm.
MR-H07	Latest Stories		Surface relevant/recent Storyboard content.	Story card.	—
MR-H08	Media Cart		Allow eligible media assets to be collected for download.	Asset + selected rendition.	Cart persistence /download packaging TBD.
MR-H09	Media Lightbox		Preview image/media results.	Media preview + next/previous controls.	—
MR-H10	Contacts / Company Content		Provide applicable journalist-facing contact/company information.	Contacts, documents or supporting links.	Exact homepage placement to confirm.

The current assessment identifies News, Images, Videos, Models, Press Kits and Latest Stories as repeated homepage discovery components, supported by media-cart, lightbox and sharing functionality.

B. Shared Media Room Listing Pattern

The listing/search pattern applies, with page-specific configuration, to:

- News;
- Press Kits;
- Images;
- Videos;
- other aggregated search results where applicable.

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
MR-L01	Listing Search	Search within applicable Media Room content.	Keyword.	Relationship with global search TBD.
MR-L02	Content-Type Filter	Filter results by relevant content type.	All / Stories / News / Press Kits / Images / Videos where applicable.	Exact availability by page TBD.
MR-L03	Faceted Filters	Narrow applicable results.	Model, bodywork, category and other agreed facets.	Complete metadata/facet model TBD.
MR-L04	Result Grid/List	Present matching items.	Content-specific card variants.	—
MR-L05	Result Card	Provide relevant information and destination/action.	Varies by News / Press Kit / Image / Video.	Card definitions to be finalised per content type.
MR-L06	Pagination / Load More	Access further results.	Result continuation.	Interaction pattern TBD.

C. Press Release/News

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
MR-PR01	Press Release Header	Present press-release identity and publication information.	Headline, date, hero/supporting image, metadata.	Exact structure to validate against live example.
MR-PR02	Structured Article Content	Present press-release body in controlled structure.	Lead/bullets, paragraphs, images and supporting sections.	Final authoring structure TBD.
MR-PR03	Audio Reading	Provide audio rendition where required.	Audio player/embed.	Retention/vendor TBD.
MR-PR04	PDF Download	Allow user to download press-release text /document.	PDF asset.	Generation vs authored asset TBD.
MR-PR05	Infographic	Preview and download applicable infographics.	Preview image + downloadable PDF/asset.	—
MR-PR06	Video	Allow playback and, where provided, separate source-file download.	Video preview + downloadable asset.	Provider/delivery TBD.
MR-PR07	Media Downloads	Provide related journalist-ready media.	Image/video/document assets.	DAM source TBD.

D. Press Kit

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point

MR-PK01	Press Kit Header	Present kit identity and primary information.	Title, imagery, date/model/category where applicable.	—
MR-PK02	Structured Narrative	Present Press Kit information in controlled content sections.	Introduction and model/topic-specific sections.	Mandatory/optional sections TBD.
MR-PK03	Variant / Bodywork Selector	Allow navigation between applicable vehicle variants where required.	Variant/bodywork cards or selector.	Final interaction TBD.
MR-PK04	Grouped Content	Organise Press Kit supporting material.	Texts, Infographics, Technical Data, Images, Videos.	Tabs/accordion/presentation TBD.
MR-PK05	FAQ	Present structured question/answer information where applicable.	Question + answer entries.	Reusable vs kit-specific source TBD.
MR-PK06	Individual Asset Download	Download individual supporting assets.	Asset/rendition.	—
MR-PK07	Complete Press Kit Download	Download the whole Press Kit as a package where required.	ZIP/package.	Packaging approach TBD.

E. Model Pages – Media Room

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
MR-M01	Model Hero / Header	Identify model and provide primary visual.	Image + model details.	—
MR-M02	Model / Bodywork Selector	Select applicable model/bodywork configuration.	Model/variant information.	—
MR-M03	Model-related News	Surface associated News content.	News cards.	Retrieval rules TBD.
MR-M04	Model-related Press Kits	Surface associated Press Kits.	Press Kit cards.	—
MR-M05	Model-related Stories	Surface associated Stories.	Story cards.	—
MR-M06	Model-related Images	Surface associated Images.	Image cards + download.	—
MR-M07	Model-related Videos	Surface associated Videos.	Video cards.	—

F. Images

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
MR-I01	Image Listing	Display relevant image assets.	Image cards/grid.	—
MR-I02	Image Filters	Narrow assets using applicable metadata.	Model, bodywork, category etc.	Metadata model TBD.

MR-I03	Image Preview	Open an image in a lightbox/modal.	Selected image + navigation.	—
MR-I04	Download Rendition	Download supported image size.	Original / reduced rendition.	Rendition strategy TBD.
MR-I05	Add to Cart	Add selected rendition to media cart.	Asset + rendition.	—

G. Vdeos

ID	Component / Capability	Requirement / User Behaviour	Key Content / Configuration	Notes / Open Point
MR-V01	Video Listing	Display Media Room videos.	Video cards/grid.	—
MR-V02	Video Filters	Narrow videos using applicable metadata.	Applicable taxonomy/facets.	Metadata model TBD.
MR-V03	Video Preview / Playback	User can view selected video.	Thumbnail/player.	Video provider/delivery TBD.
MR-V04	Video Download	Download video file where supplied for media use.	Downloadable asset.	DAM/source-file model TBD.

6. Editorial, Authoring & DAM Requirements - WIP

6.1 Page Structures / Templates

The target solution shall support reusable page structures appropriate to the main page families.

Initial structures include:

Page Structure	Authoring Intent
Storyboard Homepage	Configured landing page composed from approved homepage blocks.
Story Category / Subcategory	Reusable category hero + content listing structure.
Series Listing	Reusable Series hero + Series cards/grid.
Storyboard Model Page	Model hero/details + model-related content listing.
Story Detail	Flexible editorial composition using approved content blocks.

Media Room Homepage	Landing page using Media Room-specific content/discovery blocks.
Media Room Section / Listing	Reusable banner/search/filter/listing structure.
Press Release	More structured editorial page pattern.
Press Kit	Structured page supporting defined narrative and grouped media sections.
Media Room Model Page	Structured model information + related content collections.
Image / Video Listing	Configured media search/filter/listing pattern.

Requirement: An editor shall be able to create a new applicable page using an approved reusable page structure without requiring page-specific development.

The final mapping of these structures to Universal Editor, document-based authoring or another EDS approach remains TBD.

6.2 Content Creation and Configuration

Editors shall be able to:

- create and edit applicable content;
- add/remove/reorder permitted blocks on flexible page types;
- populate structured fields on controlled templates;
- select and reuse assets;
- configure card/listing content sources where permitted;
- configure headings, links, CTAs and related content;
- apply required metadata;
- configure supported component/card variants.

Different pages may require different visual/card configurations even when they use the same underlying content capability.

The target solution should therefore support **controlled component variants**, rather than requiring authors to recreate the full presentation manually.

6.3 Preview and Publishing

The authoring environment shall support the required editorial lifecycle:

Page setup Content creation/edit Preview Publish

The solution shall additionally support, subject to final workflow confirmation:

- updates to published content;
- unpublishing;
- scheduled publication;
- review/approval;
- pre-publication visibility control.

6.4 Roles and Permissions

Role-based permissions shall support appropriate separation between relevant editorial groups.

Expected user groups may include:

- HQ editors;
- Storyboard editorial teams;
- Media Room / PR editors;
- Agencies/suppliers;
- local-market editors;
- approvers;
- administrators.

Detailed role mapping remains to be confirmed.

6.5 Restricted Pre-Publication Content – Author Access

The target authoring/DAM environment shall support a **secured folder or equivalent protected content area** for confidential pre-publication content.

Business scenario:

Assets and content related to a future launch are prepared before public release and must only be accessible to a selected authorised group.

The solution shall therefore support:

- group-based access;
- protection of both content and underlying assets;
- prevention of unauthorised reuse/discovery;
- controlled release/publication when the restriction no longer applies.

6.6 Restricted Article Access – End Users

The public experience shall support restricted access to selected articles/content where required by the business.

A known use case is providing selected subscriber/user access through a **QR-code initiated journey**.

The detailed access model remains open and must clarify:

- whether authentication is required;
- whether QR codes are unique or shared;
- expiry rules;
- subscriber/entitlement validation;
- access duration;
- forwarding/sharing behaviour.

6.7 Auditability

Editor activity and material content changes shall be traceable for governance and operational monitoring.

This should include, where available:

- user;
- date/time;
- content changed;
- publication/unpublication activity;
- relevant restricted-content activity.

Assumption: the required change-history/audit capability is expected to be provided through the selected AEM/EDS authoring setup; technical validation is required.

6.8 Language and Market Setup

The solution shall support the required market/language structure and appropriate author permissions.

The detailed future model remains to be clarified with Business and Agency, including:

- definitive locale list;
- HQ versus local ownership;
- content cloning/reuse;

- market-specific content;
- fallback behaviour;
- permissions.

For an individual content item, the language selector shall expose only language versions that actually exist for that item.

6.9 DAM Requirements

The authoring solution shall support management and reuse of relevant digital assets including:

- images;
- videos;
- PDFs;
- infographics;
- downloadable documents/media.

Required capabilities include:

- author browsing/selection of managed assets;
- structured asset organisation;
- metadata;
- copyright/credit information where applicable;
- content-to-asset relationships;
- suitable image/media renditions;
- reuse across applicable pages;
- restricted/pre-publication assets;
- migration of existing applicable media.

AEM Assets is the preferred target direction. Dynamic Media use and detailed DAM integration remain to be confirmed.

7. Content Migration Requirements - TBD

Content migration is in scope at product-requirement level.

ID	Requirement
MIG-01	Establish the agreed inventory of content and assets to be migrated.
MIG-02	Migrate the agreed historical Stories, News/Press Releases, Press Kits, Series, model content and associated media.
MIG-03	Map existing page/content/component structures to the corresponding target AEM/EDS structures.
MIG-04	Preserve required content metadata, publication information, categorisation and locale relationships.
MIG-05	Preserve content-to-asset relationships and required downloadable media.
MIG-06	Preserve URLs where feasible and identify redirects where required.
	Validate migrated content/assets and document migration exceptions.

MIG-07	

Detailed volumes, retention/exclusion rules, automation, transformation rules and reconciliation criteria shall be elaborated with the migration team.

8. Non-Functional Requirements - TBD

8.1 URL & SEO

The migration shall preserve existing public URL structures where feasible and support required redirects where URLs change.

SEO requirements shall cover, as applicable:

- page titles;
- meta descriptions;
- canonical URLs;
- indexation directives;
- sitemap;
- structured metadata where required;
- continuity of existing indexed content.

Detailed current SEO configuration requires validation with the current technical/SEO team.

8.2 Analytics & Tracking

The website shall support the organisation's approved analytics/tag-management tooling.

The detailed analytics platform remains **TBD**.

High-level tracking should cover relevant interactions such as:

- page views;
- section/content type;
- category;
- language/market;
- navigation;
- search;
- filters;
- content/card selections;
- downloads;
- media-cart actions
- video interaction;
- subscription interaction;
- Related Stories / Explore More interactions.

Detailed event naming, data-layer structure and implementation tooling shall be defined with Analytics/Architecture.

8.3 Cookie Consent

Functional

Users shall be able to:

- accept applicable cookies;
- reject applicable optional cookies;
- manage consent preferences.

Non-Functional / Integration

Content, analytics, external embeds and other applicable functionality shall respect the recorded consent state.

The target CMP and integration approach remain TBD.

8.4 Newsletter / Subscription

Functional

The applicable subscription experience shall support:

- email capture;
- required consent;
- validation;
- submission;
- success feedback;
- error feedback.

Non-Functional / Integration

The solution must support secure transmission of the required subscription information while meeting applicable privacy/consent requirements.

The target subscription provider and integration approach remain TBD.

8.5 Performance

The target EDS implementation shall meet agreed performance and Core Web Vitals criteria.

Detailed measurable thresholds shall be confirmed with Engineering/Architecture/SEO.

8.6 Accessibility

The target implementation shall support agreed accessibility requirements across pages and interactive components.

Required coverage includes components such as:

- navigation
- forms
- filters
- carousels
- modals/lightboxes
- media controls
- interactive cards

Target WCAG level 2 and formal acceptance criteria remain to be confirmed.

9. Out of Scope / Likely Deprecated Areas

The current Podcast area is no longer actively used and is a strong candidate for removal. Some category stripes and category structures on the homepage are not expected to be retained in the same form. The dedicated app integration may become obsolete, although RSS feed continuity is still desirable. Skodapedia is expected to continue outside Storyboard, so Storyboard should not be designed around its current inclusion.

- **Full Site Page Coverage** : Not every page template gets rebuilt in this phase. The PoC delivers a faithful, as-is frontend for a defined subset of page types (Media Room home and one Model page, extendable to Story, Press Release, and Press Kit once approved) — not all eleven model instances or every content type documented elsewhere in this requirements set. Remaining templates and models follow in a later phase once the approach is proven here.
- **Backend Depth Beyond What Renders the Frontend:** The EDS setup is kept deliberately minimal: enough content structure and block wiring to render the in-scope pages correctly, not the full governance layer described elsewhere in this document — role-based permissions, embargo/password-protected publishing, audit trail, market-segmented editing. That layer is real and required eventually, but it's a subsequent phase, not a precondition for proving the frontend works.
- **Bulk or Automated Content Migration:** Moving the full historical article, press-release, and asset library out of WordPress is out of scope. Only the sample content needed to populate and demonstrate the in-scope pages is carried over, by hand if necessary.
- **Visual Redesign:** No new design or UX simplification beyond what's already explicitly agreed with the business. The frontend is delivered as-is — same look, same structure, same behavior — not reimagined, so this phase proves migration fidelity, not a design refresh.

- **Recommendation Logic:** Tag-Based Aggregation In Scope, Personalization Out of Scope. The existing tag-based aggregation pattern already live on the site — "Based on tags: X, Y" strips such as Related Stories, the Model page's five content strips, and the homepage's content sliders. Out of scope for this phase: any move toward personalized, behavioral, or ML-driven recommendations, and any editorial curation tooling for what populates less strictly tag-driven placements such as Explore More. The frontend surfaces the same tag-driven content it does today; it does not get smarter in this phase.
- **Full Localization Tooling:** The content-cloning and per-market authoring workflow is documented as a target-state requirement, but isn't built in this phase. The PoC frontend runs in one representative locale; multi-market authoring tooling comes later.
- **Third-Party Integration Rebuilds:** Replacing the AI audio-reading vendor, the newsletter platform, or the mobile app/RSS pipeline is out of scope. Where an in-scope page needs one of these to render, the existing embed or link is reproduced as-is, not rebuilt or upgraded.
- **Search and Redirect Execution:** The target search/recommendation behavior and URL redirect strategy are specified as requirements elsewhere in this document, but actually building a production-grade search backend and executing the full redirect map are pre-go-live execution tasks, not part of this delivery — a simplified or stubbed data source behind the same frontend is acceptable here

~~10-~~ Open questions Cart:

1. cart functionality - Selection across stories and Media room.
   - Include an Icon thru out the session.
   - Seperate page with a structure Your downloads, package, Download page, Empty package (clear all)
     - DIsplay of selected items
     - Display order
     - Selection CTA (different for different types)
2. cart functionality - Selection across stories and Media room.
   - Include an Icon thru out the session.
   - Seperate page with a structure Your downloads, package, Download page, Empty package (clear all)
     - DIsplay of selected items
     - Display order
     - Selection CTA (different for different types)
3. Share options - To be available at site level and story or page level ?
4. Advanced Filter options - Deep dive into the setup- Options, Dsiplay logic for selection and suboptions under each category. - Images/videos/models
   Sincgle selection
5. Media room: 2 column - 6 card default view.
   Include the total number of options/Artciles available.
   Launch 6 set additional on every click of view more CTA
   a. Sorting - Assending or descending options for list of items available
6. Press kits: Need a walk tru of the section in detail.
   - Explore option - Whatsapp.
   - Download teh complete presskit (Complete)
   - Subsections - Include chapters
   - Tags ?? how are they displayed on what factors
7. Subscription - IN scope ? (solution available?)
   a. Registration steps to be included ?

      https://www.skoda-media.de/form
   b. Subscription to STories or Newsletter?
      Currently different wording
8. Footer: App download links - Skoda Media room (for iOS & Android)
9. Search logic — Should search results across content types be ranked by recency, relevance, or editorial curation? And should the Media Room home page's own search bar support all content types (including Press Kits), or is that intentionally narrower than the shared listing-page search?
10. Language and country selectors — What's the definitive, current list of supported locales per section (Stories vs. Media Room), and should a missing translation hide that language option entirely or fall back to English/HQ content?
11. Featured/promoted content — Is the homepage's featured carousel editorially curated (manually pinned) or purely "most recent," and how many items should it show?
12. ~~The "Latest News" block is new to this document set — need to confirm its content source (is it pulling Media Room press releases onto the Stories side?) andIs it in scope for this phase?~~

11. Functional Requirements – Press Releases and Press Kits

11.1 Press Release Structural Baseline

Press release pages are structurally similar to story pages (Section 8) but include the Media Room-specific features described in Sections 11.2 through 11.5 below. No live press release detail page snapshot has yet been reviewed directly, so these requirements should be treated as reported business behavior pending verification against a live example, which should be requested as a next step (Section 23).

11.2 AI-Generated Audio Reading

A press release may include an AI-generated audio reading of the article text. In the current solution, the audio player is provided by an external service via embedded code, meaning the target solution does not necessarily need to replicate the same technical component if equivalent functionality can be provided differently. Whether audio reading is present on every press release or only a subset, and the current vendor providing it, should be confirmed with the business team.

11.3 Downloadable Article Text (PDF)

Press releases support a downloadable PDF of the article text, prepared specifically for journalistic use — a clean, citation-ready format distinct from the web page's own rich layout.

11.4 Infographics

Infographics are represented on the page as preview images that link through to a downloadable PDF file — the same preview-image-to-PDF pattern later confirmed as one of the five grouped content areas on the Press Kit detail page (Section 11.11).

11.5 Video Handling

Videos attached to Media Room content, including press releases, may be previewed through external services while also being independently downloadable as a file stored in the CMS — preview and download are two separate delivery paths for the same video asset, both required.

11.6 Press Kits Listing (Shared Search Template)

The Press Kits listing renders on the same underlying search-results template used for Images, Videos, News, and Stories, confirmed directly from the live page's own content-type filter control, which exposes exactly the values All, Stories, News, Press Kits, Images, and Videos. This is the definitive filter taxonomy for the sitewide search/aggregation component: one shared listing/search component, parameterised by content type, rather than five separate page builds.

11.7 Press Kits Filter Facets

Beyond the content-type selector, the listing supports additional taxonomy filters confirmed in the live markup: model (for example Peaq, Epiq, Fabia) and bodywork (for example SUV, Hatchback), plus general category filters (for example anniversary or motorsport-themed categories). These must be exposed as combinable filters, not just the content-type selector, and the complete current filter-facet list beyond this single example should be confirmed with the business team.

11.8 Press Kit Narrative Sections

The Press Kit detail page presents a fixed sequence of narrative sections, confirmed in this order on the Peaq press kit: Introduction, Exterior, Interior, Battery and powertrain variants, Safety and assistance systems, and Connectivity. Each is a distinct heading with supporting rich text and imagery beneath it — a fixed template, in contrast with the freely-orderable component model used for Stories (Section 8.3). Whether this exact section sequence is fixed across every press kit or varies by product type (for instance, a combustion-only model would not need a battery/powertrain section) should be confirmed with the business team, since this determines whether the EDS template should treat these as required fields or optional/conditional sections.

11.9 Model-Variant Subsection

A dedicated subsection for a specific model variant (Škoda Peaq Sportline, on this example) appears after the core narrative sections, confirming the press kit template must support one or more variant-specific subsections nested within the main page, not just a flat section list.

11.10 Frequently Asked Questions

An FAQ section (question/answer pairs) is included as a distinct, named section — the first confirmed appearance of an FAQ pattern anywhere in this document (earlier review of the Model Page Template found no FAQ section there). Whether FAQ content is authored per press kit or drawn from a shared, filtered pool should be confirmed with the business team.

11.11 Grouped Media/Download Areas

A press kit must support multiple grouped content areas, confirmed on the live page as five sequential named sections in this order: Texts (downloadable text content such as article text and backgrounders), Infographics (the preview-image-to-PDF pattern from

Section 11.4), Technical data (structured specification data for the model/variant covered), Images (downloadable image set, following the same Original/1920px dual-rendition pattern used elsewhere on the site), and Videos (downloadable/embeddable video set). Whether these five groups render as tabs, an accordion, or stacked sections is a visual/interaction detail to be confirmed during design, not assumed here.

11.12 Whole-Kit ZIP Download

A press kit must support download of the entire press kit as a single ZIP file, in addition to the per-item downloads within each grouped area above. This was not directly observable in the static page snapshot, likely because it is a dynamic/scripted control, so the current implementation mechanism should be confirmed with the technical team.

11.13 Social Sharing and Sidebar

The Press Kit detail page carries the same social sharing control described in Section 8.11 (X, Pinterest, LinkedIn, Facebook, WhatsApp), the same Contacts / Subscribe / Company sidebar block described in Section 9.10, and the same footer company block described in Section 6.7 — all confirmed present on this page, reinforcing that these are shared, sitewide components rather than features specific to any one page type.

11.14 Internal Categorization

Press kit pages may include additional internal categorization/filtering, such as model-related or topical subsets, consistent with the taxonomy filters confirmed on the listing page (Section 11.7).
